Allowable Subject Matter

1. Claims 1-26 are allowed.
2. The following is an examiner's statement of reasons for allowance: Balson, III (U.S. Patent No. 5,241,580) teaches a method for using an expert system to validate the customized call processing information (CCPI) records which permit a customer to customize services in a telephone network. The information corresponding to a CCPI record is converted into a set of "schemas" for evaluation by the expert system. These "schemas" are tested against a set of rules by the expert system which indicates errors in the CCPI record (Abstract). Smith (U.S. Patent No. 5,832,068) teaches a dynamic data record excluder determines whether the received data record was previously received by comparing at least a portion of the received data record with data stored in the data record index. If a data record referencing the same account number was previously received, the previously received data record is discarded, marked "to be excluded" and/or a data record exclusion indicator is generated, and only the newest record will be processed. However, regarding claims 1-26, prior art of record fails to teach, or renders obvious, alone or in combination, a data communication system configured to promptly determine the validity of establishing the line connection between terminals and a host computer and maintaining the line connection. The data communication system includes at least a plurality of terminals and a sender telephone number detecting/informing device, which are interconnected by way of telephone lines including the public switched telephone

network for use in the caller number identification and display service. By registering in the host computer ID codes for the terminals and telephone numbers corresponding to the respective ID codes, and by subsequently comparing the telephone number, which is currently detected and informed by sender telephone number detecting/informing means, with those registered previously, the line connection is established and the data communication is initiated with the terminal only when the telephone number is found among those registered.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
